## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of the connector of claims 1 and 2 (Group 1) in Paper No. 4 is acknowledged.

### *Drawings*

Figures 1 and 4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

**Correction is required in response to this Office action and corrections may not be held in abeyance.** Applicant is required to submit acceptable corrected drawings within the time period set in the Office action. See 37 CFR 1.185(a). Failure to take corrective action within the set (or extended) period will result in **ABANDONMENT** of the application.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in —

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a);

Art Unit: 2833

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Dixon et al. ("Dixon"). Dixon discloses a press fit connector comprising housing 21 provided with holes 24, pins 12 secured by forcing shoulder parts (26, 28) through the holes, wherein the holes include gaps (see figure 7) formed between the shoulder parts and the inner walls 32 of the holes.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dixon as in claim 1 in view of the admitted prior art. The Dixon gaps are capable of receiving a housing removing tool. Dixon does not show stepped parts on the house. Dixon suggests that the form of the housing is not particularly critical to the invention (see col. 3, lines 29-33). The admitted prior art includes a housing including a stepped portion useful for facilitating removal of the housing. At the time of the invention, it would have been obvious to form the Dixon housing with a stepped portion as suggested by the admitted prior art. The suggestion or motivation for doing so would have been to facilitate removal of the housing with a tool as taught in the admitted prior art (specification at page 4, lines 20-25).
